CAREER OBJECTIVE

Computer Science and Engineering graduate with practical experience in Python programming, AI-powered applications, web development, and software engineering. Equipped with a strong foundation in coding, logical reasoning, and application design through internships and academic projects. Seeking an entry-level Software Engineer or Python Developer position to build reliable, high-performance solutions and advance within a collaborative, technology-driven environment.

EDUCATION

Bachelor of Technology (Computer Science and Engineering) 2022 - 2026
NBKR Institute of Science and Technology CGPA: 8.36/10

EXPERIENCE

Python Programming and Development Dec 2025 - Mar 2026
Innovate by Hexaind

- Completed a 16-week internship in Python Programming & Development, gaining hands-on experience in Python application development and software engineering practices.

Frontend Developer June 2025 - August 2025
Rejoice

- Developed responsive, accessible web interfaces using HTML, CSS, and JavaScript, and optimized performance by improving code structure — reducing page load time by approximately 30%.

TECHNICAL SKILLS

- **Programming Languages** Python, SQL(MySQL)
- **Frontend** HTML, CSS, JavaScript, React.js
- **AI** Prompt Engineering
- **Web Tools** GitHub, VS code
- **Common Skills** MS Office (Word, Excel, PowerPoint)

SOFT SKILLS

Communication | Time Management | Problem Solving | Leadership

PROJECTS

An Intelligent surveillance system for object-based threat detection using YOLO - Algorithm and threat tracking using ESP32 and instant alerts to secure personnel.

- Designed and Implemented an autonomous surveillance system using YOLOv7 for real-time person detection and a custom-trained YOLO model for weapon (knife) identification.
- Integrated a dynamic pan-tilt camera control mechanism, enabling real-time subject tracking with an ESP32 micro controller, ensuring continuous focus on identified threats.
- Achieved 80% accuracy in threat detection and reduced estimated response time by over 60% compared to manual surveillance systems.
- Engineered a responsive Flask-based Command Center using HTML5 and CSS3, enabling security personnel to register, manage, and monitor live AI-processed video streams from any device on the network.
- Utilized Google AI Studio (Gemini 3 Flash Preview) to accelerate development, improve problem solving efficiency, and refine key components of the system's architecture.

AI Assisted Chatbot for food ordering app.

- Developed an AI-powered chatbot system to handle user queries and deliver automated responses, improving responses time by around 40%.
- Designed a responsive and user-friendly interface using flutter and Dart, ensuring smooth cross-platform performance across multiple devices.
- Implemented efficient backend processing and concurrent query handling, allowing the chatbot to manage multiple user requests simultaneously with improved system performance.

CERTIFICATIONS

- **Quantum Fundamentals** by Wiser/Amaravati Quantum Valley: Quantum algorithms, circuit design, and applications (APSCHE).
- **Artificial Intelligence** by Edunet Foundation (IBM SkillsBuild): comprehensive advanced AI curriculum including supervised learning, neural networks, model optimization, hyperparameter tuning, and production-grade ML deployment strategies.
